RetainAI: The AI That HR Can Trust

1 in 4 of your people will quit this year. Most of them? You'll never see it coming.

Your best developer — the one who's been here since the beginning — walks in on a Tuesday and says *"I'm leaving."* No warning. Nothing in their file. They just seemed fine. And now they're gone.

Why Traditional HR Tools Keep Failing

The problem isn't a lack of data. It's a lack of tools HR can actually use — and that employees can actually trust.

🧩 The Black Box Problem

Your AI says **"High risk: 87%."** But why? Nobody knows — not the vendor, not HR. If you can't explain it to your boss or the employee, you're not going to use it. Simple as that.

🔍 The Privacy Paradox

Predicting attrition means using personal data. But employees know when they're being watched — and they should be concerned. GDPR, CCPA, and one wrong move can put your company in serious trouble.

⚠️ The Bias Trap

AI learns from your history. If your company has promoted men over women for a decade — even unintentionally — your new AI may learn that's normal. Same human mistakes, just faster.

THE SOLUTION

An AI That Tells You *Why*

"We didn't build another AI tool for HR. We built something HR can actually use — and something employees can actually trust."

Explainable AI

Real reasons, in plain English — not just a risk score

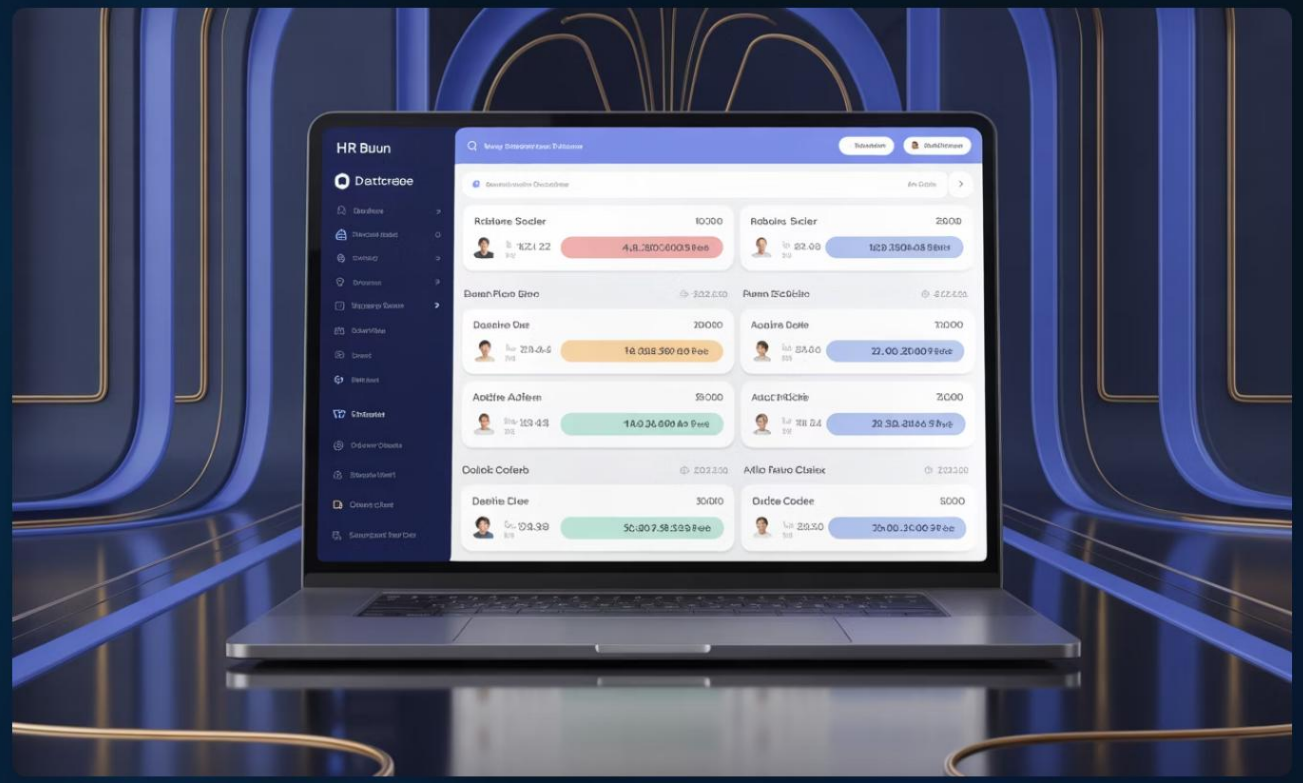
Privacy by Design

GDPR-compliant by default, not as an afterthought

Built-in Fairness

Bias checks run before every prediction reaches HR

How RetainAI Works: A Real Example



Meet Sarah

High performer. Our system flags her as **"at risk."** Click *Explain* — and here's what HR actually sees:

- No salary adjustment in **18 months**
- Team size decreased by **40%**
- Last promotion was **32 months ago**
- Workload has **significantly increased**

Now HR can act: a conversation, a promotion, a workload review. **This isn't about predicting departure — it's about preventing it.**

Trust Is Built In, Not Bolted On

1. Explainable AI

Plain language AI explanations. Identify risk factors. Actionable insights.

2. Privacy by Design

Anonymized data. Encrypted IDs. Full regulatory compliance.

3. Fairness Verified

Pre-prediction bias checks. Multi-group demographic validation.

Every Prediction Comes With Two Badges

🔒 Privacy Protected

Employee identity anonymized at every step

⚖️ Fairness Verified

Bias detected and corrected before HR ever sees a result

> **"Employees should own their own story. We're just helping translate it."**

THE CLOSE

Retention Is About Understanding. Understanding Needs Trust.

RetainAI: The AI that tells you WHY — and keeps your people safe while doing it.

We're looking for partners who believe the future of HR is **transparent, fair, and human.** Let's build that future together.

- AI HR can actually use
- We empower HR — not replace it
- Trust built in from day one
